

Dr. Gerg's Things That Work

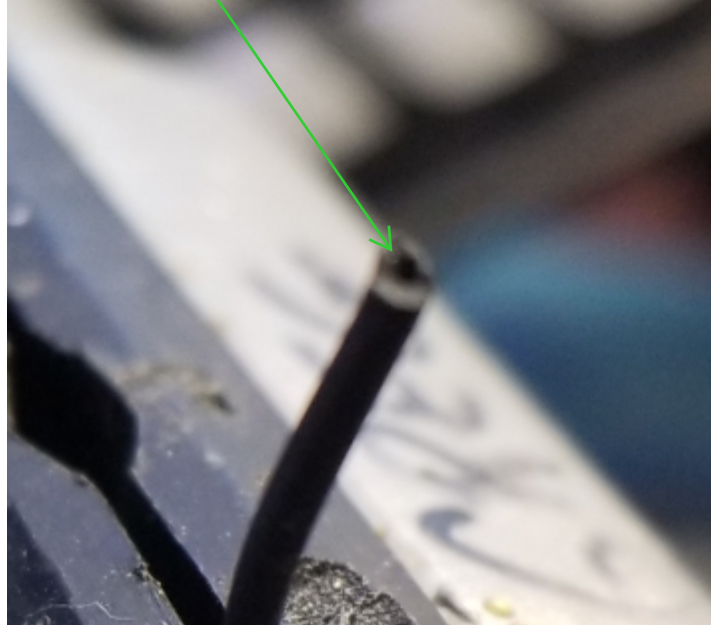

Field Tips

Verifying the Location of an Intermittent Open.

Cut out a 2" section at the suspected break.
Strip back 1/8" or so, and pull the wire out of the jacket.
If you get what you see in these two pics, you found it.

No wire.
(because we pulled it out, remember?)

First One End.

You can see the wire here.

Then the Other.
